

“Explore New Tools for Studying Protein Biology and Cellular Responses”

Protein Interactions | Protein Expression & Degradation & Secretion
| Autophagy | Apoptosis | Receptor Internalization

The seminar offers an excellent opportunity to learn more about new tools and applications for exploring protein biology. We will present the newly developed HiBiT Protein Tagging System enabling the analysis of endogenous protein expression and protein function.

Furthermore, the versatile platform technologies NanoBRET™ and NanoBiT® will be introduced, which enable the setup of dynamic protein interaction assays in live cells as well as the assembly of biosensors, monitoring different kinds of cellular responses.

Program:

Część 1

HiBiT - Innovative Protein Tagging System
Discussion & Short Break

Część 2

Set-up of Protein Interaction Assays

Rejestracja: www.promega.com/seminarium

Do zobaczenia na seminarium!
Z poważaniem
